

# Aquawood Fensterlasur HF

53845 ff

Water-based wood glaze for wooden windows and front doors for industrial and professional

It has been matched as a system with a 3-coat structure

	PRODUCT DESCRIPTION	
General	Water-based, breathable wood glaze. Good weather resistance and high transparency. High filling power, high block resistance, good mechanical resistance. Fast water resistance. Environmentally friendly, highly water vapour permeable. The product is formulated without the addition of biocidal active agents to protect against blue stain and wood-destroying fungi.	
Special properties and standards	DIN 53160-1 and DIN 53160-2 perspiration and saliva-proof properties	
	<ul> <li>ÖNORM EN 71-3 Safety of toys; migration of certain elements (free of heavy metals)</li> </ul>	

French ordinance DEVL1104875A regarding the marking of construction coating products for their emission of volatile pollutants: Α+

#### Application area

- For dimensionally stable timber components for exterior and interior use, such as e.g. wooden windows and front doors, etc.
- For humid areas (e.g. indoor pools) only with a special coating system.
- For non-dimensionally stable timber components we recommend thin-film systems such as Pullex Plus-Lasur 50314 or Pullex Aqua-Plus 53101.
- Please observe the relative technical data sheets of the products.

### **PROCESSING**

# Instructions for use

- Please stir the product before use.
- The temperature of the product and object, and the room temperature must be at least + 15 C.
- The optimal conditions for use are between 15 25 °C with a relative atmospheric humidity between 40 – 80 %.
- Too high dry film thicknesses beyond around 120 µm reduce the diffusion capacity and should thus be avoided.
- Sealants must be compatible with the coat and may only be applied once the paint has dried through. Sealing profiles with plasticizers

08-20 (supersedes 04-16) ZKL 5110

ADLER-Werk Lackfabrik, A-6130 Schwaz

Phone: 0043/5242/6922-190, Fax: 0043/5242/6922-309, email: technical-support@adler-lacke.com

- tend to stick together in combination with paints. Please only use those types that have been tested.
- We do not recommend applying two layers of Aquawood Fensterlasur HF 53845 ff with intermediate sanding, because due to the content of a matting wax, a polishing effect and therefore a poor intermediate adhesion is possible.
- An intermediate coating with Aquawood Intermedio ISO 53613 ff is recommended to prevent air inclusions in deep-pored hardwood species and to avoid film interference on larch.
- When changing from Aquawood Fensterlasur HF 53845 ff to other water-based paint systems, care must be taken to adequately clean the pipes and spray equipment, preferably with warm water.
- Please follow our ARL 300 Working guideline for coating dimensionally stable and limited dimensionally stable construction elements - General part along with all standards and guidelines for window construction.

# **Application technique**

Application method	Airless	Airless air-supported (Airmix, Aircoat, etc.)	Cup gun
Spray nozzle (ø mm)	0.28 or 0.33	0.28 or 0.33	1.8 – 2.0
Spray nozzle (ø inch)	0.011 or 0.013	0.011 or 0.013	-
Spraying angel (degrees)	20 – 40	20 – 40	-
Spraying pressure (bar)	80 – 100	80 – 100	3 – 4
Atomized air (bar)	-	0,5 – 1,5	-
Spraying distance (cm)	approx. 25		
Thinner	water		
Thinner amount added in %	0 – 5	0 – 5	0 – 10
Wet film (µm)	225 - 275		
Yield per application (g/m²)1)	450 - 500		
Dry film complete coating system (µm)	80 up to max. 120		
1) Yield including addition of thinner and loss while spraying			

The shape, the properties and moisture of the substrate affect the consumption/yield. Accurate values for consumption must be obtained by applying trial coats in advance.

# **Drying times**

(at 23 °C and 50 % rel. humidity)

Dust-dry (ISO 1517)	after approx. 1 hour
Tack-free	after approx. 2 hours
Stackable with PE fine foam spacers	after approx. 5 hours
at room temperature:	
Stackable with PE fine foam spacers	after approx. 130 min.
after forced drying:	
20 min flash-off zone	
90 min drying stage (35– 40 °C)	
20 min cooling stage	
Recoatable	after approx. 12 hours

The figures given above are reference values. The drying time depends on the type of substrate, coat thickness, temperature, air exchange and relative atmospheric humidity.

Lower temperatures and/or high level of atmospheric humidity can increase the drying time.

Avoid direct sunlight (very quick drying).

# Cleaning the working equipment

With water immediately after use.

To remove dried paint residues we recommend using ADLER Aqua-Cleaner 80080 (diluted 1:1 with water).

	SUBSTRATE	
Type of substrate	Wood in accordance with the guidelines for window construction.	
Substrate property	The substrate must be dry, clean, capable of holding the paint, free from separating substances such as grease, wax, silicone, resin etc. and free from wood dust, as well as tested for suitability for coating.	
Wood moisture	Dimensionally stable construction elements: 13 % +/- 2 %	
	COATING SYSTEM	
General	The following coating systems are exemplary.	
Impregnation	1 x Aquawood Primo A3 - A6 5453000310 ff	
	Intermediate drying: approx. 4 hours	
	Use wood preservatives safely. Always read the label and observe the relative technical data sheets of the products before use.	
Intermediate coat	1 x Aquawood Intermedio ISO 53613 ff	
	Intermediate drying: approx. 2 hours	
	Please observe the relative technical data sheets of the products.	

# Intermediate sanding

Grit size 220 - 240

Remove sanding dust.

# Finishing coat

1x Aquawood Fensterlasur HF 53845 ff

### MAINTENANCE AND RENOVATION

### **Maintenance and renovation**

The durability depends on several factors: these include particularly the type of weathering, constructional protection, mechanical stress and the choice of colour applied. To obtain long durability, preservation work is necessary in time. Therefore, we recommend annual maintenance.

Cleaning with ADLER Top-Cleaner 51696. Maintenance with ADLER Top-Care 7227000210 in the package ADLER Windoor Care-Set 7229000300.

Please observe the relative technical data sheets of the products.

Please follow our ARL 304 - Working guideline for coating dimensionally stable and limited dimensionally stable construction elements - Maintenance and renovation.

### ORDERING INFORMATION

#### Size of trading unit

25 kg, 120 kg; 600 kg container

# Colour shades / degrees of gloss

Frumento HF 53845 Canapa/Hanf 59056 Farblos HF 59087 Tanne HF 59093 Orzo HF 59115 Marrone HF 59117

- The final colour is basically obtained from the inherent colour of the wood, the applied quantity, the colour of the impregnation and the colour of the finishing coat.
- It is recommended to prepare a trial colour sample on the original substrate using the coating system selected in order to assess the final colour shade.
- In order to ensure uniformity of the colour shade, use only material having the same batch number on a given surface.
- In order to lay particular emphasis on the wood structure, the colour shade of Aquawood Primo selected should be darker than the one of Aquawood Fensterlasur HF.

### Supplementary products

ADLER Aqua-Cleaner 80080

	OTHER INSTRUCTIONS	
Durability / storage	At least 1 years in the original sealed containers.	
	Make sure the product is protected against moisture, direct sunlight, frost and high temperatures (above 30 $^{\circ}\text{C}).$	
Technical specifications	VOC content EU threshold for Aquawood Fensterlasur HF (cat. (cat. A/e): 130 gm/l (2010). Aquawood Fensterlasur HF contains a maximum of 21 g/l VOC.	
Safety-related information	Further information on the subject of safety during transport, storage and handling as well as disposal can be found in the relevant safety data sheet. The current version can be accessed on the Internet at www.adler-lacke.com.	
	The product is only suitable for the industrial and professional use Inhaling paint aerosols whilst spraying must generally be avoided. This ensured by correctly using a respiratory mask (combination filter A2/P2).
